

RESEARCH THEORY ONLY -- NOT FOR CLINICAL USE

This protocol is a deterministic research theory document. It is not intended to guide individual diagnosis or treatment. Use only under ethics-approved research contexts.

Level 10 Protocol: Childhood Leukemia Cure & Nanoparticle Fusion

RATIONALE & NOVELTY

This scroll proposes a deterministic, scroll-structured approach to curing childhood leukemia -- combining precision genetics with nanoparticle fusion. It is novel in four key ways:

1. Child-Centered Compass (Scroll 91): Ethical north is defined not by institution, but by protecting and aligning with the child's future state.
2. Therapeutic Integration: Fusion of siRNA, CRISPR, and immunologic triggers into a single targeted delivery, made marrow-permeable and patch-deliverable.
3. Global Access Model: Open AI Research Coalition (OARC) design ensures non-corporate, non-patent-limited access for humanitarian deployment.
4. Deterministic Authorship Lock: Every phrase, payload, and logic layer is traceable -- scroll-locked to prevent hallucination, drift, or misuse.

This is not a drug ad. It is not a clinical claim. It is a map. And if someone gets to it one day earlier, the map may change everything.
